POWERFUL APPS TO HELP YOU
MANAGE & CONTROL
YOUR SECURITY OPERATIONS!

In an increasingly competitive industry, flexibility, efficiency and accessibility are absolutely essential. At Destiny Software, Inc., we have made it our mission to help keep your security business operating as efficently as possible. From our Business Intelligence module for your administration team to our Destiny Mobile software for your patrol officers, we are working hard to bring you products that streamline your operations, maintain your client's accessibility to you and their properties, and remain flexible as your business grows.

Scalable Technology

We take pride in catering to small to medium sized security firms. Although there are many features that we provide, you can use only what you need for a small operation. As we work together to increase your company's revenue, you may utilize our other features as your needs grow.

Our product infrastructure was designed for this specific reason: to help our clients, big and small, learn how to use the various features that enable them to run their companies more efficiently and economically, while giving small companies "room to grow", and large companies a way to streamline their operations.

Limiting Liability

Statistics show that patrol officers tend to drive a bit more aggressively because they are in a patrol car.

We have found that poor driving habits are a matter of awareness. Our software has advanced Speeding Alerts and Report features that will instantly notify you when your drivers are going over set speed limits. With our GPS tracking system not only can your officers make sure they are using the most efficient routes, but supervisors have the ability to hone in on officers while they are on patrol. When patrol officers know they are being tracked, they modify their behavior almost immediately. This reduces accidents, tickets and careless wear and tear on your vehicles.

In addition, our software allows you to send daily maintenance reports to either a fleet manager or your mechanic, who can schedule maintenance for every vehicle in order to keep your units in top condition. This not only will extend the life of your fleet, but also provide a safer work place and reduce the risk of maintenance related accidents. These reports also allow you to have an accurate history of each vehicle in the event of collision or workman's comprehension claims, that are essential to accident investigations.

How We Help You Attract Clients

We offer a multitude of features that will appeal to your potential clients, from GPS map verification of guard tours and patrol visits in real time, to detailed maintenance reports that display pictures of the maintenance issue along with a satellite map of the location where the maintenance issue exists.

Our software does more than just provide you with tools to present to clients, but we can personally assist you in creating a sales campaign that you can print out and take to your next sales meeting. In fact, you will see greater interest from your potential clients when you show them your sales materials highlighting a variety of different features that your company will be able to provide.

Increasing Efficiency

Your days of deciphering illegible reports riddled with poor grammar and spelling errors are gone. Our reporting feature improves how your officers and personnel create reports. Since they are generated electronically, reports will be "type written", fixing any issues with legibility right from the start. If you have an officer with poor writing skills, our Report Review option will allow a member of your management or administration team to correct errors before the report is submitted to your client. In addition, our reporting software allows your officers to attach images and videos to their reports.

Because of the nature of our submission process, your clients will never again have to deal with lost reports, making multiple copies of reports, or the hassles of searching for reports. In fact, Destiny gives your clients the means to be actively involved with their properties on a DAILY basis through our Client Portal.

Increasing Work Integrity

Destiny Software, Inc. offers a variety of ways for you to assure your client's satisfaction with your services by eliminating some of these common complaints.

Here are some common complaints about security or patrol officers and under each complaint is how Destiny Software, Inc. eliminates these issues:

Security company not being accountable.

A supervisor or dispatcher can constantly monitor all officer locations and officers may create and upload reports instantly.

Long lunches and breaks while not on client property.

Ability to verify break locations and tell when an officer is back on site.

Speeding/reckless driving.

Speed alarm set by the administrator so if a vehicle travels faster than the set speed limit, an e-mail is automatically sent within seconds to the indicated recipient notifying them of the vehicle number and their current speed.

Officer stays in one location and fails to perform his duties.

In the case of a standing officer, see that the officer is doing his rounds and performing his duties. Officer also has to comply with commands using our RODAN Technology.

Reports that were never created or are "missing".

All locations are loaded into the database and can be easily found using the GPS function.

Leaving property to go to non-account locations.

If an officer or patrol vehicle is not moving for an extended period of time, dispatch can zoom in on the location and forward it to a supervisor who can check on the officer's safety and be sure they are awake.

Our Services:

Destiny Mobile

Destiny mobile is the highlight of our patrol software suite. Destiny mobile offers your company a means of reporting, tracking, and communication. Utilizing destiny mobile, your employees can create reports, receive dispatches, scan guardtour codes, and more.

ADAM 602

Our desktop app was designed with ease of use in mind but optimized for maximum functionality. Adam 602 is the most robust of our applications offering all of our reports and access to dispatch using a windows based computer(traditional laptop or microsoft surface pro).

License Plate Recognition

License plate recognition is a technology we are perfecting in an effort to assist all our clients with parking management. Our lpr program integrates between all of our reporting software and utilizes our servers to provide information almost instantly.

Dispatch / Director Module

Our new Dispatch Module allows you to control Multiple CID's and view details associated with that location. Here you can view specific CIDs, Officers, Accounts, and Devices. As well as any post orders and account information.

Scheduling Module

Destiny software now offers our clients an easy alternative to employee time management. Utilizing your company's user base, you can easily create schedules for each of your employees for every account you have, calculate how many hours they worked within a set period, and employees are able to view all set shifts within our employee portal.

Vehicle / Unit Tracking

Destiny uses GPS trackers to generate reports of exact routes used with timestamps to ensure your officers are visiting your properties. We can also determine if an officer is speeding, travelling to unauthorized areas, hard braking, jack rabbit starting, and much more. You can also set up GeoFences to ensure that vehicles / units do not venture into undesignated areas or locations.
